Integration or Acceptance Test Checklist

Integration Test Plan

- Have all test execution procedures been defined and documented?
- Have all interfaces been defined and documented for testing?
- Have all testing dependencies been addressed (driver function, hardware, etc.)?
- Are all data set definitions and setup requirements complete and accurate?
- Have all inter-case dependencies been identified and described?
- Has the entire testing environment been documented?

Integration or Acceptance Test Cases

- Have all interfaces been tested as specified in the integration test plan?
- Were the tests successful as defined in the plan?
- Does each integration test case include a complete description of the expected input and output, or result?
- Do the integration test cases accurately implement the integration test plan?
- Have all inter-case dependencies been addressed in the test cases?
- Is each condition tested at least once?
- Have all test entrance and exit criteria been observed?
- Are the integration test cases designed to show the presence of failure and not merely the absence of failure?
- Are the integration test cases designed to show omissions and extensions?
- Are the integration test cases complete, correct, and unambiguous?
- Are the integration test cases documented so as to be 100 percent reproducible?
- Do the integration test cases define required results?
